DETAILED ACTION

Claims 1-14 are pending. Drawings, 4 sheets, were filed with the application.

Response to Election/Restrictions

Applicant's election without traverse of species of Group II, pyridine in Paper No. dated May 4, 2004 is acknowledged. *The claims have been examined to the extent they read on the elected invention.*

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Information Disclosure Statement

The information disclosure statement (IDS) was submitted on December 29, 2003. Accordingly, the examiner has considered the information disclosure statement.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fey et al USP 5,849,749.

Fey et al teach 6-(hydroxymethyl-ethyl)pyridines as inhibitors of HMG-CoA reductase. See column 1 lines 13-36. The sole difference is that the reference does not recite the specified characteristics.

One of ordinary skill in the art would be motivated to practice the claimed invention as a chemical compound and its properties are inseparable. Patentability does not therefore depend solely on the similarity of the formula of the claimed compound to that of a prior art compound. The unobviousness of its properties must also be considered. As the reference compounds are inhibitors of HMG-CoA reductase, they would inherently possess the claimed properties absent some showing to the contrary.

Claims 2-4, 6-8, 10-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The claims have been examined to the extent they read on the elected invention.
